REVIEW REPORT

Title: Sectional Semi-B-Near lattices: A Hierarchy, Filters, and Congruences
Authors: B. Tharuni, Naveen Kumar Kakumanu, S. S. Raju, Y. Ravi Babu, G. Laxmi Prasanna
Manuscript ID: 260809_ACM_TKRBP_260953

This manuscript develops a sectional framework for semi-B-nearlattices by combining distributive nearlattice structure with Epstein–Horn style implication on principal upsets. It establishes a hierarchy involving near-semi-B-algebras, SSBN-algebras, and DNSB-algebras, and develops results on sectional order, filters, prime extension, spectrum embeddings, and congruences under downward-directedness. The topic is relevant to algebraic logic and lattice theory, and the manuscript presents several potentially useful structural observations, including a meet-based characterization of generated filters. However, the mathematical presentation contains identifiable notation, numbering, and formula-level inconsistencies that must be resolved to ensure the stated results and examples are internally reliable. The paper may be considered for publication after major revision**.**

1. On page 7: ("Observation 2" → "**Remark 2**")
2. On page 8, Theorem 1: ("by Theorem 2, $[a)$ is a semi-B-algebra" → "**by Definition 7, $[a)$ is a semi-B-algebra**")
3. On page 15, Theorem 5: ("join generated by ∪" → "**join generated by $\bigcup i\ Fi$**")
4. There are some sentences which have unclear meaning in the abstract, authors should correct them.
5. Discuss the limitations of existing studies with the proposed one.
6. Authors should use common symbols which can be easily understood and read.
7. Cite all references in the text.
8. Irrelevant references should be deleted from the list of references.
